

PRELIMINARY

COP888CLP/COP884CLP

Single-Chip microCMOS Microcontroller

General Description

The COP888CLP and COP884CLP are piggyback versions of the COP888CL and COP884CL. These two devices are identical except that the piggyback device has been placed permanently in ROMless mode so that program memory is only accessed externally. The device package incorporates circuitry and a socket on top of the package to accommodate an EPROM such as an NMC27C64. With the addition of the EPROM, the COP888CLP and COP884CLP perform as their masked equivalent. The COP888CLP/COP884CLP are fully static parts, fabricated using double-metal silicon gate microCMOS technology. Features include an 8-bit memory mapped architecture, MICROWIRE/PLUSTM serial I/O, two 16-bit timer/counters supporting three modes (Processor Independent PWM generation, External Event counter, and Input Capture mode capabilities), and two power savings modes (HALT and IDLE), both with a multi-sourced wakeup/interrupt capability. This multi-sourced interrupt capability may also be used independent of the HALT or IDLE modes. Each I/O pin has software selectable configurations. The COP888CLP and COP884CLP operate over a voltage range of 4.5V to 5.5V. High throughput is achieved with an efficient, regular instruction set operating at a maximum of 1 μ s per instruction rate.

Features

- Low cost 8-bit microcontroller
- Fully static CMOS
- 1 μ s instruction cycle time
- 128 bytes on-board RAM
- Single supply operation: 4.5V–5.5V
- MICROWIRE/PLUS serial I/O
- WatchDog and Clock Monitor logic
- Idle Timer
- Multi-Input Wakeup (MIWU) with optional interrupts (8)
- Ten multi-source vectored interrupts servicing
 - External Interrupt
 - Idle Timer T0
 - Two Timers (Each with 2 Interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS
- Two 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- 8-bit Stack Pointer SP (stack in RAM)
- Two 8-bit Register Indirect Data Memory Pointers (B and X)
- Versatile instruction set
- True bit manipulation
- Memory mapped I/O
- BCD arithmetic instructions
- Package:
 - 40 N with 33 I/O pins
 - 28 N with 21 I/O pins
- Software selectable I/O options
 - TRI-STATE® Output
 - Push-Pull Output
 - Weak Pull Up Input
 - High Impedance Input
- Schmitt trigger inputs on ports G and L
- Real time emulation and full program debug offered by National's Development Systems

Note: UNUSED pins (15 and 16 on the 40-pin package) must be connected to GND.

Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage (V_{CC})	6V
Voltage at Any Pin	$-0.3V$ to $V_{CC} + 0.3V$
ESD Susceptibility (Note 4)	2000V
Total Current into V_{CC} Pin (Source)	100 mA

Total Current out of GND Pin (Sink)	110 mA
Storage Temperature Range	-65°C to $+140^{\circ}\text{C}$

Note: Absolute maximum ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications are not ensured when operating the device at absolute maximum ratings.

DC Electrical Characteristics $0^{\circ}\text{C} \leq T_A \leq +70^{\circ}\text{C}$ unless otherwise specified

Parameter	Conditions	Min	Typ	Max	Units
Operating Voltage		4.5		5.5	V
Power Supply Ripple (Note 1)	Peak-to-Peak			0.1 V_{CC}	V
Supply Current (Note 2) CKI = 10 MHz	$V_{CC} = 5.5V$, $t_c = 1 \mu s$			100	mA
HALT Current (Note 3)	$V_{CC} = 5.5V$, CKI = 0 MHz			80	mA

FIGURE 4

Oscillator Circuits

The chip can be driven by a clock input on the CKI input pin which can be between DC and 10 MHz. The CKO output clock is on pin G7 (crystal configuration). The CKI input frequency is divided down by 10 to produce the instruction cycle clock ($1/t_c$).

Figure 5 shows the Crystal and R/C diagrams.

CRYSTAL OSCILLATOR

CKI and CKO can be connected to make a closed loop crystal (or resonator) controlled oscillator.

Table I shows the component values required for various standard crystal values.

R/C OSCILLATOR (Special Order Only)

By selecting CKI as a single pin oscillator input, a single pin R/C oscillator circuit can be connected to it. CKO is available as a general purpose input, and/or HALT restart pin.

Table II shows the variation in the oscillator frequencies as functions of the component (R and C) values.

FIGURE 5. Crystal and R/C Oscillator Diagrams

TABLE I. Crystal Oscillator Configuration,
 $T_A = 25^\circ\text{C}$, $V_{CC} = 5\text{V}$

R1 (k Ω)	R2 (M Ω)	C1 (pF)	C2 (pF)	CKI Freq (MHz)
0	1	30	30-36	10
0	1	30	30-36	4
0	1	200	100-150	0.455

TABLE II. R/C Oscillator Configuration,
 $T_A = 25^\circ\text{C}$, $V_{CC} = 5\text{V}$

R (k Ω)	C (pF)	CKI Freq (MHz)	Instr. Cycle (μs)
3.3	82	2.8 to 2.2	3.6 to 4.5
5.6	100	1.5 to 1.1	6.7 to 9
6.8	100	1.1 to 0.8	9 to 12.5

EPROM Selection

The COP888CLP and COP884CLP are the piggyback versions of the COP888CL and COP884CL microcontrollers, (see Table IV). With the addition of an EPROM this part is the functional equivalent of the masked version.

Table III lists the minimum access times for a given instruction cycle time of the microcontroller. At high speeds an NMC57C64 (an 8k byte device) or any comparable EPROM must be used.

TABLE III. EPROM Selection

EPROM Minimum Access Time	COP Instruction Cycle Time
120 ns	1.00 μs
150 ns	1.10 μs
200 ns	1.27 μs
250 ns	1.44 μs
300 ns	1.60 μs
400 ns	1.94 μs

TABLE IV. Options

Order Part Number	Options
COP888CLP-XE	Crystal Oscillator Divide by 10 with Halt Enabled. This is identical to the masked COP888CL and COP884CL with Option 1 = 1; Option 2 = 1.

Development Support

MOLE™ DEVELOPMENT SYSTEM

The MOLE (Microcomputer On Line Emulator) is a low cost development system and emulator for all microcontroller products. These include COPs™ microcontrollers and the HPC family of products. The MOLE consists of a BRAIN Board, Personality Board and optional host software.

The purpose of the MOLE is to provide the user with a tool to write and assemble code, emulate code for the target microcontroller and assist in both software and hardware debugging of the system.

It is a self contained computer with its own firmware which provides for all system operation, emulation control, communication, PROM programming and diagnostic operations.

It contains three serial ports to optionally connect to a terminal, a host system, a printer or a modem, or to connect to other MOLEs in a multi-MOLE environment.

MOLE can be used in either a stand alone mode or in conjunction with a selected host system using PC-DOS communicating via a RS-232 port.

How to Order

To order a complete development package, select the section for the microcontroller to be developed and order the parts listed.

Development Tools Selection Table

Microcontroller	Order Part Number	Description	Includes	Manual Number
COP888	MOLE-BRAIN	Brain Board	Brain Board Users Manual	420408188-001
	MOLE-COP8-PB2	Personality Board	COP888 Personality Board Users Manual	420420084-001
	MOLE-COP8-IBM	Assembler Software for IBM	COP800 Software Users Manual and Software Disk PC-DOS Communications Software Users Manual	424410527-001 420040416-001
	420411060-001	Programmer's Manual		420411060-001

DIAL-A-HELPER

Dial-A-Helper is a service provided by the Microcontroller Applications group. The Dial-A-Helper is an Electronic Bulletin Board Information System and additionally, provides the capability of remotely accessing the MOLE development system at a customer site.

INFORMATION SYSTEM

The Dial-A-Helper system provides access to an automated information storage and retrieval system that may be accessed over standard dial-up telephone lines 24 hours a day. The system capabilities include a MESSAGE SECTION (electronic mail) for communications to and from the Microcontroller Applications Group and a FILE SECTION which consists of several file areas where valuable application software and utilities could be found. The minimum requirement for accessing the Dial-A-Helper is a Hayes compatible modem.

If the user has a PC with a communications package then files from the FILE SECTION can be down loaded to disk for later use.

Order P/N: MOLE-DIAL-A-HLP

Information System Package Contains
DIAL-A-HELPER User Manual P/N
Public Domain Communications Software

FACTORY APPLICATIONS SUPPORT

Dial-A-Helper also provides immediate factory applications support. If a user is having difficulty in operating a MOLE, he can leave messages on our electronic bulletin board, which we will respond to, or under extraordinary circumstances he can arrange for us to actually take control of his system via modem for debugging purposes.

Voice: (408) 721-5582
Modem: (408) 739-1162
Baud: 300 or 1200 Baud
Set-Up: Length: 8-Bit
Parity: None
Stop Bit: 1
Operation: 24 Hours, 7 Days
